Professional Summary

MSc Mathematics graduate with training in **Data Science** and **Natural Language Processing (NLP)**. Currently a **Data Science Intern** with experience in building predictive models and performing complex data analysis. Strong foundation in **statistical modeling** and **machine learning**, with a keen interest in applying **Generative AI** within the **banking and financial services** sector.

Skills

Technical skills

- **Programming & Databases:** Python, SQL (MySQL), Basic SAS.
- **Data Science & ML:** Statistical Analysis, Natural Language Processing (NLP), Linear Regression, Classification, Model Evaluation, Feature Engineering, Data Cleaning, EDA.
- **Libraries:** NumPy, Pandas, Scikit-learn, **NLTK, Spacy** (standard NLP libraries), Matplotlib, Seaborn.
- **Tools & Visualization:** Microsoft Excel (Advanced), PowerPoint, Tableau, Jupyter Notebook, VS Code, Google Colab.
- **Mathematical Foundations:** Linear Algebra, Calculus, Probability & Statistics, Optimization.
- **Emerging Tech:** Generative AI, Large Language Models (LLMs), Cloud Platform Exposure (GCP)

Professional Experience

Data Science Intern, *Techolas Technologies* - Present

June – Present

- Executed end-to-end **data cleaning** and **exploratory data analysis (EDA)** on diverse datasets using **Python** and **Pandas**.
- Developed and evaluated **machine learning models** using **Scikit-learn**, implementing classification and regression techniques for real-world business problems.
- Utilized **model evaluation metrics** (Accuracy, Precision, Recall, Cross-validation) to optimize model reliability and performance.
- Collaborated in a team environment to interpret data trends and present findings to stakeholders using **PowerPoint** and **Excel**.
- Researched the integration of **NLP** and **Generative AI** to automate report generation, aligning with emerging industry trends

Projects

Customer Subscription Prediction Using Machine Learning, *Machine Learning*

- Built a classification model to predict customer subscription outcomes for a **financial services** dataset.
- Performed data preprocessing, feature encoding, and handled class imbalance to improve model sensitivity.
- Selected the optimal model based on rigorous evaluation, demonstrating strong **problem-solving skills**

Warehouse & Shipment Analysis (Kaggle Dataset), *Machine Learning*

- Analyzed shipment delivery data to identify key factors affecting on-time delivery.
- Handled categorical and ordinal variables and justified feature selection decisions to streamline the model.
- Translated technical metrics into meaningful business insights regarding logistics efficiency

Education

Masters in Mathematics, <i>Mar Thoma College, India</i>	2025
Bachelors in Mathematics, <i>St Thomas college,Kozhencherry</i>	2023

Certificates

- Data Science Professional Certificate
- Introduction to AI
- Introduction to MS Excel

Languages

- MALAYALAM
- ENGLISH
- TAMIL
